BARRINGTON

The Barrington collection of premium watch winders have been created with three concepts in mind:

Precision, Quality & Design

Precision

To keep your timepiece in pristine condition all Barrington Watch Winders allow variable Turns Per Day (to suit each size of watch) and intermittent rotation cycles all carefully controlled by a central microchip. Such precise engineering is the hallmark of every winder and ensures the long-term performance of both it and the watches entrusted to it.

Quality

Advanced circuit board technology, ultra-quiet motors and scratch resistant cushions all housed in robust casing mean the focus on quality is evident throughout. The Barrington logo is your assurance of the high standard of the winder and the one year warranty on all products reinforces this.

Design

From the compact size of the single winders in stylish colours to the sleek lines of the modern multi-watch winder cabinets, the designs of the Barrington Watch Winder range makes them stand apart from others and they serve as a conversation piece in their own right.

SINGLE WATCH WINDER

The Barrington Single Watch Winder provides an elegant solution to keeping your watch functioning when not on your wrist. Its compact size and near silent motors allow it be used discreetly in the home or office and the range of 7 colours available mean there is always a winder to suit your décor or mood. The key features of this winder are:

“ *Each winder has a specifically designed scratch resistant cushion that can be adjusted to suit different band sizes. The casing finish has several layers of high gloss lacquered paint. All winders are stamped with the Barrington seal of approval - a reassuring mark of quality.* ”

Multiple rotation options (Clockwise, Counter Clockwise and Alternate)

Multiple Turns Per Day (TPD) settings: 650, 750, 900 & 1950

Variable setting cushion with scratch resistant surface

Near silent motors

LED operation light

Operated by 2 x AA batteries or AC mains

Compact size measuring just 11 x 11 x 15 cm

Customisation Options

As an additional service to retailers we can also customise any of our winders to meet your specifications. You can have your own livery and branding added to the winders, making them a unique product to sell in-store or a personal gift to give loyal customers. We can also supply a range of watch boxes and other watch accessories with minimum order quantities.

DOUBLE WATCH WINDER

For winding multiple watches Barrington can offer a contemporary collection of elegant winding cabinets that both display the watches beautifully and wind them with the precision you would expect from a brand like Barrington.

The 2 watch winder has the following features:

2 individually programmable rotors

Multiple TPD options (650, 750, 850, 1000, 1950)

Multi-directional winding options
(CW, CCW, Alternate)

Built in drawer for extra storage

LED strip down-lighting

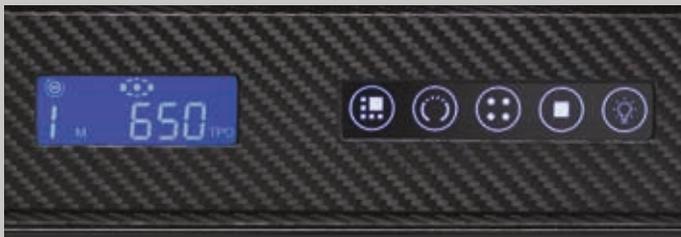

Ultra-quiet motors

Scratch resistant soft foam cushions

All controlled either from the digital control panel
or via infra-red remote control

AC Mains powered

High gloss black lacquered display case measuring
24 x 18 x 26

4 WATCH WINDER

4 WATCH WINDER

To suit the growing watch collection, Barrington have created the 4 watch winder to safely house and wind your watches while at the same time showing them off in optimum conditions. Those who admire clean, functional design will also desire this unit as a stylish addition to their home or office.

4 individually programmable rotors in
2 rows of 2

Multiple TPD options (650, 750, 850, 1000, 1950)

Multi-directional winding options
(CW, CCW, Alternate)

Built in drawer for extra storage

LED strip down-lighting

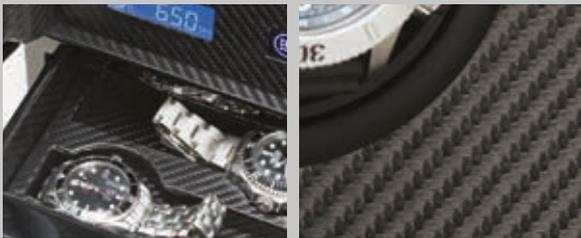

Ultra-quiet motors

Scratch resistant soft foam cushions

All controlled either from the digital control panel or
via infra-red remote control

AC Mains powered

High gloss black lacquered display case
measuring 24 x 18 x 35

What is a watch winder and why should you use one?

An automatic watch is a precision piece of engineering and, like your car or any other complex machine, it benefits from being used rather than left idle. Inside your watch are many cogs, levers and springs, all of which are lubricated by a very fine oil that keeps the watch functioning at optimal performance. Using a watch winder helps ensure that the mechanism is kept lubricated and operating as it should.

It also adds an element of convenience. Leaving your watch in a winder ensures that when you come to wear it you can be confident that the time is correct and the watch can be immediately worn without the fuss of having to adjust the date or time.

How to use your Barrington Watch Winder

Our winders are designed to be easy to use. Simply remove the cuff from the winder, wrap your watch around it and close the bracelet/strap, then replace the cuff. Next you need to set the rotation direction – clockwise, counter-clockwise, or alternating between the two – and how many Turns Per Day (TPD) you wish it to rotate for. Most watch manufacturers provide guidance on this, but as a rule of thumb heavier watches require more TPD and we prefer setting our watches on an alternating rotation schedule. Once the settings have been adjusted, the winder will begin winding your watch.

How our winders care for your watch

Barrington Watch Winders operate on a principle of gentle rotation. Mindful of the delicate mechanism of your watch, all our winders rotate for a minute before resting and then starting again for another minute, with the interval period determined by how many TPD you have selected (a lower number of TPD means a longer interval while a higher number of TPD leads to a shorter interval). To further protect your watch Barrington Watch Winders only operate for twelve hours in every twenty-four. This means the one-minute cycles will continue only over a twelve-hour period and for the next twelve hours the winder will rest. You can set your winder to predominantly rotate during night-time hours or daytime hours depending on your preference.

Quiet and convenient

Our watch winder motors are quiet and suitable for placing in an office, living area or even a bedroom. Single Winders can be operated with two AA batteries, meaning they can be placed in a safe without requiring a mains power supply; battery life will depend on the weight of your watch and the TPD setting.
